Abstract

This document defines a policy language used to declare a set of content restrictions for a web resource, and a mechanism for transmitting the policy from a server to a client where the policy is enforced.

Status of This Document

This section describes the status of this document at the time of its publication. Other documents may supersede this document. A list of current W3C publications and the latest revision of this technical report can be found in the [W3C technical reports index](http://www.w3.org/TR/) at <http://www.w3.org/TR/>.

This document describes a proposal that has been discussed by the broader community for about two years. There are experimental implementations in Firefox and Chrome, using the header names `X-Content-Security-Policy` and `X-WebKit-CSP` respectively. Internet Explorer 10 Platform Preview also contains a partial implementation, using the header name `X-Content-Security-Policy`.

Řešení #2

```
$cfg['HideStructureActions']
```

Awesome stuff. Thanks for adding this feature!
I was finding the rendering of those menus really bogged when viewing the structure of a large table over a remote connection or using an older machine.

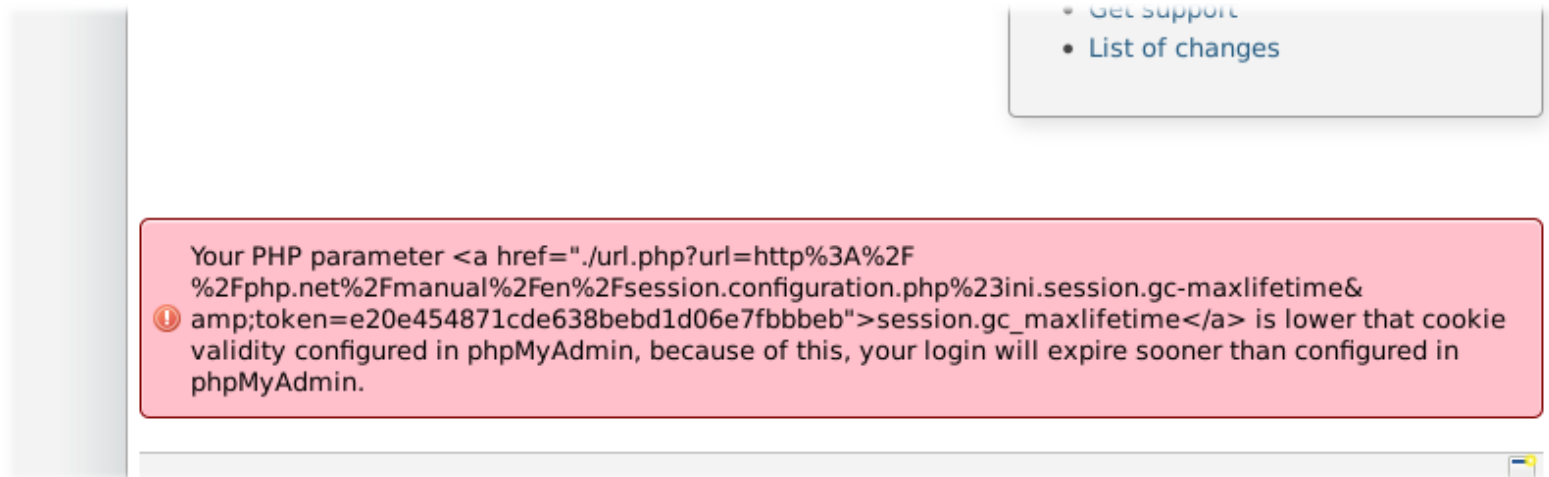

Řešení #3

if (`navigator.userAgent.match(/(iphone|ipod|ipad)/i)` ...) ...

Řešení #4

PMA_sanitize(sprintf(...

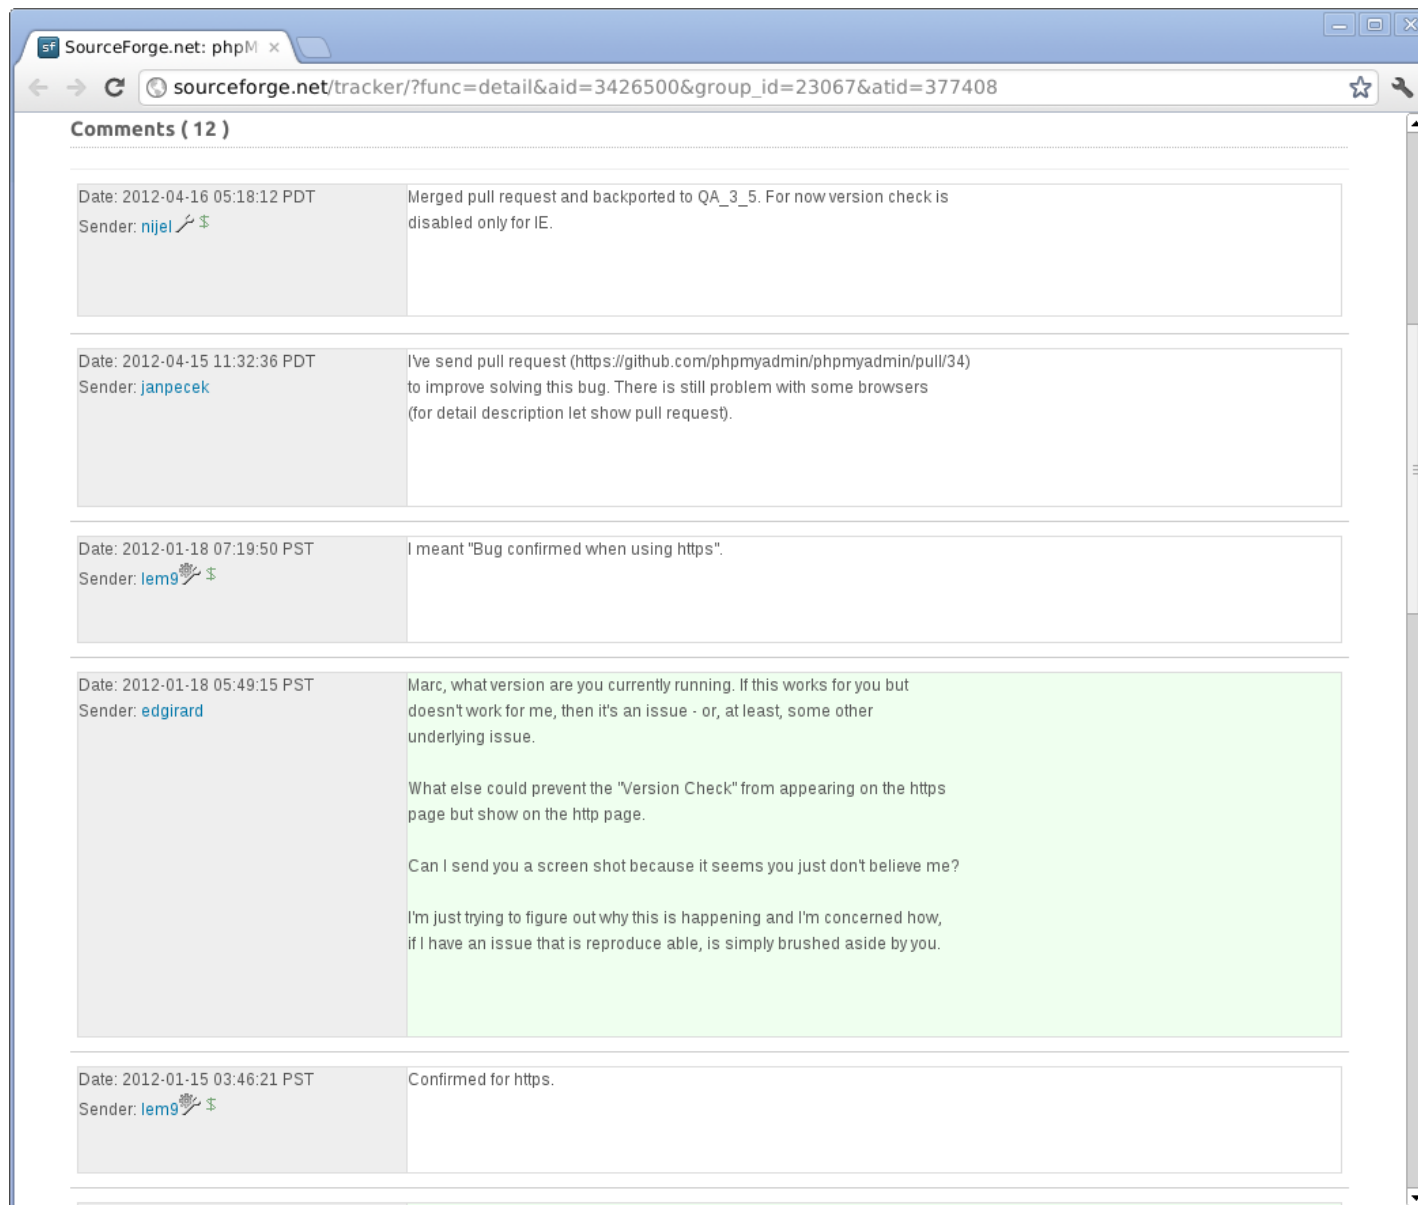

The screenshot shows a web interface with a navigation menu at the top right containing two items: "Get support" and "List of changes". Below the menu is a large red error box with a warning icon. The error message states that a PHP parameter is lower than the cookie validity configured in phpMyAdmin, causing the login to expire sooner. The parameter is a URL with a session configuration path.

- Get support
- List of changes

Your PHP parameter `session.gc_maxlifetime` is lower than cookie validity configured in phpMyAdmin, because of this, your login will expire sooner than configured in phpMyAdmin.

Komunikace

The screenshot shows a web browser window with the SourceForge.net tracker page. The browser's address bar displays the URL: `sourceforge.net/tracker/?func=detail&aid=3426500&group_id=23067&atid=377408`. The page title is "Comments (12)". The comments are listed in a table-like format with columns for Date, Sender, and the comment text.

Date	Sender	Comment
2012-04-16 05:18:12 PDT	nijel	Merged pull request and backported to QA_3_5. For now version check is disabled only for IE.
2012-04-15 11:32:36 PDT	janpecek	I've send pull request (https://github.com/phpmyadmin/phpmyadmin/pull/34) to improve solving this bug. There is still problem with some browsers (for detail description let show pull request).
2012-01-18 07:19:50 PST	lem9	I meant "Bug confirmed when using https".
2012-01-18 05:49:15 PST	edgirard	Marc, what version are you currently running. If this works for you but doesn't work for me, then it's an issue - or, at least, some other underlying issue. What else could prevent the "Version Check" from appearing on the https page but show on the http page. Can I send you a screen shot because it seems you just don't believe me? I'm just trying to figure out why this is happening and I'm concerned how, if I have an issue that is reproduce able, is simply brushed aside by you.
2012-01-15 03:46:21 PST	lem9	Confirmed for https.

Komunikace

The screenshot shows the Mozilla Thunderbird email client interface. The top menu bar includes File, Edit, View, Go, Message, Events and Tasks, gContactSync, OpenPGP, Tools, and Help. Below the menu is a toolbar with icons for Get Mail, Write, Address Book, Reply, Reply All, Forward, and Quick Filter. A search bar is located at the top right of the message list.

The message list on the left shows several emails, with the following subjects and dates visible:

The selected email is from Madhura Jayaratne <madhura.cj@gmail.com> with the subject "Re: [Phpmyadmin-devel] Table zoom search option is broken" dated 05:08 PM. The recipient is phpmyadmin-devel@lists.sourceforge.net. The message content is as follows:

On Wed, May 16, 2012 at 2:51 PM, Atul Pratap Singh <atulpratapsingh05@gmail.com> wrote:
Hi Madhura,
The Table zoom search option is broken after function name fixes done in the commit 60f84a045ec53be94c4cb837d8f70ad210990f7a.
Please fix the function names in tbl_zoom_select.php (line 178).

Fixed.

lem9 is assigned No milestone

I've implemented Feature Request ID: 3475567 (http://sourceforge.net/tracker/?func=detail&aid=3475567&group_id=23067&atid=377411) as I announced in comments at SF. There're more possibilities how to do it. I've chosen removing a drop down list HTML elements and checking it in JS. I hope there're no other hidden things I've not found. Hope, you'll agree.

(Otherwise, I think, there is a bug with resizing but I must try it more and in other browsers. After that I'll create bug or try to repair it.)

Hi,
When touching a piece of code, if you see a "\n" generated for HTML, it's pretty much safe to remove it (if proven otherwise, we'll build a wiki page documenting those cases).

The reason was to generate more readable HTML code; now that we (hopefully) use Firebug to look at the generated HTML, these "\n" are no longer needed.

I'm not sure how good of an idea this is. What about the casual user that might want to have a stab at figuring out where something is going wrong, for example? Such a user may not have firebug.

Bye,
Rouslan

It's mostly older parts of the codebase that are using "\n", so this casual user already has this problem.

For esthetic reasons I prefer to use the "\n", the produced html looks cleaner and better structured. It's a bit like using a coding style (indentation, ...) to have readable code.

Dieter,
aren't you using Firebug to look at the HTML?

I wouldn't call Dieter a casual user, but this kind of proves my point. Also, I don't think that removing all the newlines will give us any noticeable decrease in page load times.
